

Tap **Active** Kiosk

Quick Start Guide

Version 1.0 · Last Updated July 2026

Copyright © 2026 Didur Labs LLC. All rights reserved.

What's in the Box

Starter Kit

- Control unit (mini PC, pre-configured)
- Power cable
- HDMI cable
- Proxima reader
- 20 stick-on Proxima tags

Tactus Module Kit (optional add-on) — Tactus Module (wireless receiver) + 5 Tactus buttons

1. Power On

1. Connect the Proxima reader to the control unit (USB)
 2. Connect the HDMI cable to your display
 3. Connect power and wait 30–60 seconds for boot
-

2. Connect to WiFi

If no WiFi is configured, the system starts a setup hotspot:

- **Network:** TradeShow-Display
- **Password:** setup1234

Connect a phone or laptop to that network, then open `http://192.168.4.1:8080` in a browser. Once you've logged in, use the **WiFi** tab to join your venue network — this takes the device off the hotspot.

3. First Login

- **Username:** admin
- **Password:** admin

Change your password immediately in the **Users** tab.

4. Activate Your System

Every new system includes a **3-day evaluation trial** (1 Proxima tag + 1 Tactus button) so you can test before committing.

To unlock full operation, subscribe to the **Support Subscription** at tapactivekiosk.com/#pricing. You'll need your device's **Hardware ID**, shown on the **License** tab. Your license key is emailed automatically and activates from that same tab.

5. Add Your First Video

Go to the **Library** tab:

- **Upload from computer** — MP4, MOV, MKV, or WebM
 - **Download from YouTube** — paste a URL and click Download
-

6. Assign a Tag

Go to the **Tags** tab:

1. Scan a Proxima tag on the reader (or type its UID)
2. Select the video you uploaded
3. Click **Save Assignment**

Have Tactus buttons? Assign them the same way on the **Buttons** tab.

7. Test It

Click **Simulate Scan** to preview playback without a physical tag, or just tap the tag on the reader. The display returns to your idle screen automatically when the video ends.
